DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2 and 9 rejected under 35 U.S.C. 102(e) as being anticipated by Song et al. (U.S. 6,342,938).

As to claims 1 and 9, Song et al. discloses a vertically aligned liquid crystal display having four domains per pixel region. Note in figures 1A and 1B, the opposing substrates 10 and 20, electrodes 11 and 21, alignment films 12 and 22, and polarizers 13 and 23. The liquid crystal layer 100 has a negative dielectric anisotropy. See column 3, lines 25-45. Note in figures 3 and 4, the singular point control portions consisting of apertures 211, 212, 216 and 217. A singular point is formed at the intersection of apertures 216 and 217.

As to claim 2, figures 1A and 1B show polarizers 13 and 23 disposed on the outer surface of substrates 10 and 20. As shown in figure 3, the direction of longitudinal

Application/Control Number: 09/778,627

Art Unit: 2871

axes of the molecules in each of the liquid crystal domains is substantially at a 45 degree angle to the axes of the polarizers (P1 and P2).

Claims 1-3, 7, 9 and 10 rejected under 35 U.S.C. 102(e) as being anticipated by Koma (U.S. 6,369,870).

As to claims 1 and 9, Koma et al. discloses a multi-domain liquid crystal display having an orientation control window formed in the common electrode in the middle of each pixel region. The liquid crystal has a negative dielectric anisotropy. See column 5, lines 27-34. A vertical alignment layer is formed on the inside surface of the liquid crystal panel. See column 6, lines 40-46. In figure 4, the orientation control window acts as a singular point control portion. In figure 15, a first singular point is formed under the orientation control window and a second singular point is formed between the pixel electrodes.

As to claim 2, Koma et al. teaches that the polarizing axis of the polarizing plate makes a 45 degree angle with the plane component of the optical axis of the liquid crystal molecules under control. See column 6, lines 1-10.

As to claim 3, the orientation control window would inherently cause the liquid crystal molecules in two adjacent domains to align themselves at substantially a 45 degree angle to the imaginary line connecting two singular points. In figure 15, the

Art Unit: 2871

liquid crystal molecules are directed towards the first singular point and away from the second singular point.

As to claim 7, the orientation control window formed in the common electrode constitutes a non-electrode region where no electrode material is formed. The liquid crystal molecules in the non-electrode region would be inclined substantially around the first singular point when a voltage is applied.

As to claim 10, the second singular point is formed between the pixel electrodes and over the bus line 28 as in figure 15.

Allowable Subject Matter

Claims 4-6, 8, 11 and 12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Chung whose telephone number is (571) 272-2288. The examiner can normally be reached on Monday-Friday from 8:30 am to 5:00

pm.

David Chung GAU 2871 05/31/04
